

Pulse to Chip Card Converter

ISTEC's Pulse to Chip Card Converter allows any meter with a pulse output to be compatible with the Chip Card Reading System. This is a very economical solution to sub-metering.

The pulses from the meter are counted on a 6-digit Liquid Crystal Display. They can be in Gallons, BTUs, Cubic Feet, kWhrs, lbs, etc; based on the type of meter to be converted. The display total is non-resettable and restarts from zero once the total reaches 999999. The converter uses the latest technology to transfer the total and the meter identification number onto a chip card, and into a PC.

The Pulse to Card Converter can be installed on meter covers, walls, etc; it is very easy with a variety of fastening methods, including DIN Rails. The converters have protective seals for security, to prevent tampering.

DIMENSIONS

A	B	C
3 1/2"	1"	3 1/4"

SPECIFICATIONS

Battery Life	10 yrs.
Max Impulse Frequency	1 Pulse per Sec.
Pulse Duration	20 ms
Ambient Temp.	120°F

SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE
